## The built-in shredders IBM laptop

Date: October 17, 2008

Author:Crave

News Source:[Crave](#)News Source:Nicolas Lehotzky <http://www.coroflot.com/>  
Security is Priceless

when the world was busy all the digital and traditional printing on paper still has its raison d'etre, after all, the paper does not need electricity, will not be thousands of miles of hacker intrusion or theft of information, but unfortunately , It is necessary to remove the thick pile of paper data is not as simple as pressing the delete key.

## Prototype

Two USB ports are concealed by a lockable metal cap.

Scanner / Shredder

The shape of the hinge side is cylindrical, and fits well in the hand when carrying the laptop under the arm, contributing to the feeling of security.

The screen is integrated in a way that the hinges are not accessible when it is closed. Prying the screen open would damage the hard drive and its content.

Lock/ finger scanner identifies user and lets him open the screen or adjust the security level of his laptop.

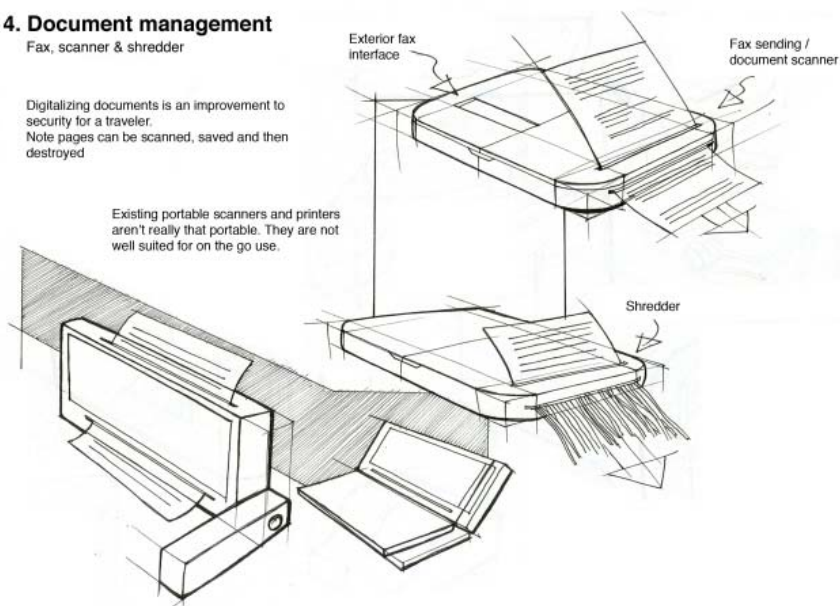

assume that you are very worried that the information was a startle people, or want to be the next agent, then this IBM "laptop security," you may be in line with demand. Forget fingerprint and TPM security chip it, this laptop with a general portable mini laptop as light, he has a safe ball, only the right fingerprint to start it, and in addition it like a physical lock Even the ports can be switched off.

#### 4. Document management

Fax, scanner & shredder

Digitalizing documents is an improvement to security for a traveler. Note pages can be scanned, saved and then destroyed

Existing portable scanners and printers aren't really that portable. They are not well suited for on the go use.

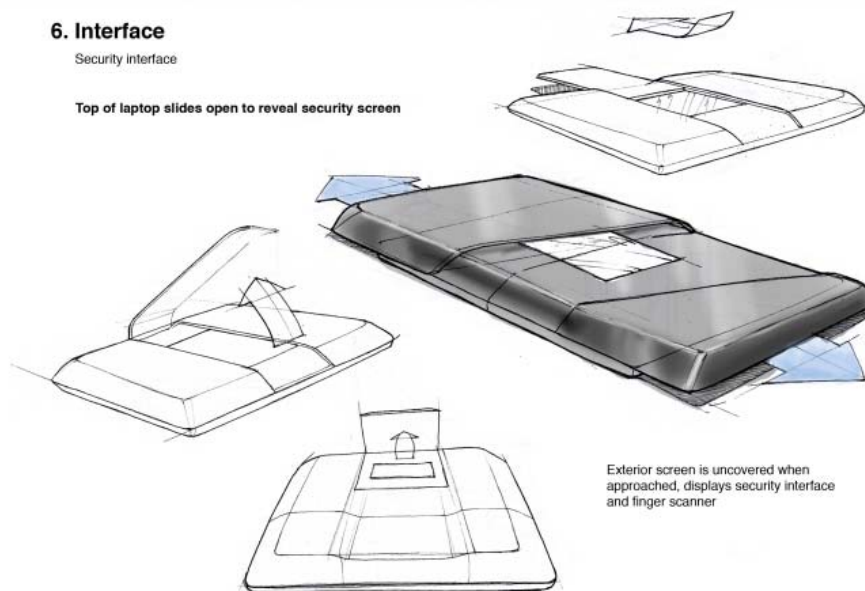

But This laptop really interesting is that it also a built-in scanners and shredders, so you can scan paper documents, digital, direct use shredders to destroy. Unfortunately, this is only a concept, not really, but if you are a controversial plan being general, we believe that you can ask IBM to help you do a similar sum exclusive power.

#### 6. Interface

Security interface

Top of laptop slides open to reveal security screen

Exterior screen is uncovered when approached, displays security interface and finger scanner

Security is priceless

- A security software application controlled by a fingerprint activated, unbreakable controller that lets the user set a security level.
- Audible and visual alarm that discourages physical theft.
- Integrated 360 degree camera captures images of people coming in contact with the laptop.
- A remote wireless lock to remotely shut down the laptop if stolen.
- Assign security level to specific files or websites.
- Password & fingerprint identification against unwanted downloads or uploads.
- Controller restricts access to the screen, keyboard, USB/FireWire ports.
- Integrated scanner/shredder lets business users digitize and destroy their notes safely.
