Functional explanation

side recorded an exclusive global leader in technology, Taiwan can only complete record of the content of the message Skype. Records can be a number of instant messaging software with the content of the message-file records (Skype, MSN, ICQ, QQ, Yahoo Messenger and so on ...). With the traditional licensing his equipment largest difference, not only to limit the use of instant messaging software, to provide a more complete record of the content. In addition to the ban on foreign companies to allow more different choices to protect the company did not release important information. To help meet the enterprise: "open and effective, active management" of the target.

Examples

According to the survey there are more than 80% of employees, work

in the use of instant messaging software (MSN, Skype, QQ ... ect) as a tool to link outside the Email. Of these, only 1% of enterprises related to corporate policy to regulate the use of instant messaging software, and backup management, enterprise policy, the lack of exposure of confidential company also at very high risk of leakage. On the market in general and traditional packet-analysis equipment, the biggest dilemma is not recorded as encrypted, blockades only passive use of the software. JFETEK JAPAN only through the increase recorded in the technical side, MISKeeper record companies could be the most common variety of instant messaging software (MSN, Skype, QQ, Yahoo Messenger, ICQ) the content of communications, including encrypted Skype can be dealt with Effective record.
