What is MISKeeper?

in the past, most security equipment from Europe and the United States, at every turn millions of people hope that they are deterred from selling price, but also many domestic small and medium enterprises can not afford. In view of this, deep in the field of information security for many years JFETEK JAPAN large number of R & D input of manpower, research and development team many years of hard work and technical cooperation with Japan. After years of research and development team time to study, research and development of the world's leading instant messaging software logging technology. In conjunction with "[IM instant messaging monitoring](#)", "[Records Web site](#)", "[control the use of the program](#)", "[hardware assets Management](#)", "[asset management software](#)", "[USB Device Management](#)", "[screen computer monitor](#)", "[Rights Management Group](#)", "[statistics](#)" and so on a number of Taiwan enterprises in line with the demand for information security. In 2006 the successful launch of the product features beyond Europe and the United States and Taiwan in line with the customary use of MISKeeper. A pile of immediate attention by the Security sector, resulting in constant topic of discussion.

traditional firewall device with MISKeeper the difference?

firewall is blocking companies from external attacks, such as hackers. As for the company through from a variety of portable devices, the leakage of secrets will not be able to carry out resistance. For enterprises, the prevention of an important secret from the internal brain drain is more important is the provision of MISKeeper enterprise information security management system the best.

enterprise information security, what is? important to you?

" offer customers ", "< strong> design ", "< strong> employee information ", "< strong> customer information " , " Code ", "< strong> patent information ", "< strong> technical documentation " Enterprises are often important confidential information, which is also confidential company The core competitiveness. If the staff was malicious or not, the information outflow to the heart, enterprises will have great influence with injury.
